

The Economic Base of Eddy County, NM

**PREPARED BY: The Office of Policy Analysis at Arrowhead Center,
New Mexico State University**

DATE: July 2013

The Economic Base of Eddy County, New Mexico

Introduction

This report is one of 35 economic base studies prepared by the Office of Policy Analysis at New Mexico State University's (NMSU) Arrowhead Center. Of the 35 reports, 33 describe the economic base of New Mexico's counties. There are separate reports for the State of New Mexico and for the Albuquerque Metropolitan Statistical Area (MSA). New Mexico has three additional MSAs (Las Cruces, Santa Fe, and Farmington) all of which are single county MSAs; separate reports for these MSAs were not prepared. All 35 reports may be found at <http://arrowheadcenter.nmsu.edu/economic-and-policy-studies/>.

The reports have been prepared under the direction of James Peach, Director of the Office of Policy Analysis. Ugo Ogbue, a graduate student in the NMSU Masters of Art in Economics program, did much of the work on the updates. Comments and suggestions are welcome and are to be sent to jpeach@nmsu.edu. Our intent is to update these reports on an annual basis.

An economic base study is a descriptive tool used to analyze the composition of the local economic activity. Economic base studies are often conducted to help guide local economic development activities and to help economic development officials make decisions such as what type of firms they should attempt to attract to local areas. Economic base studies can also assist local and regional businesses to better understand local and export product markets.

The specific purposes of economic base studies include:

- Understand regional economic growth
- Make short and long term forecasts
- Identify potential growth sectors
- Identify potential problem areas

According to economic base theory, any local economy may be divided into basic and non-basic industries. The economic base theory also suggests that economic growth depends on sectors that export goods and services out of the region (basic industries), as opposed to those businesses whose services remain local (non-basic industries). Basic industries promote local economic growth by bringing jobs and income into the local economy. Non-basic industries serve local residents and provide support to basic industries.

An industry classified as basic in one region may be identified as non-basic in another region. One common means of identifying local basic activity is through the use of location quotients (LQs). LQs are calculated as a single industry's percent of total local employment divided by that industry's percent of total state or national employment. For example, an LQ for a single New Mexico industry (industry j) may be calculated as follows:

$$LQ = \frac{(\text{Employment in industry } j \text{ in NM} / \text{total employment in NM})}{(\text{Employment in industry } j \text{ in US} / \text{total employment in US})}$$

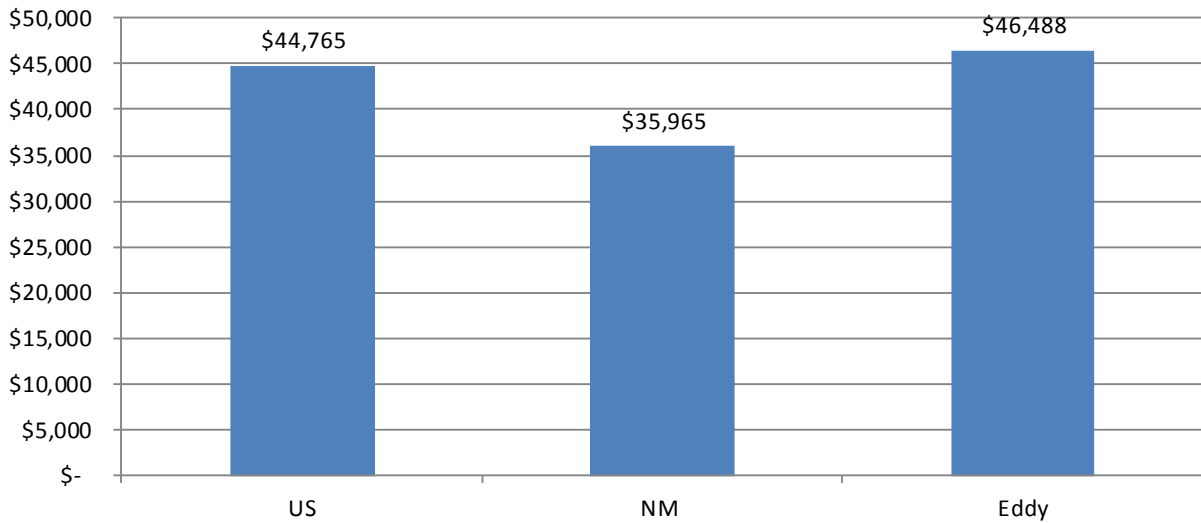

The LQ serves to illustrate the relative importance in the level of the local employment of that sector with respect to the benchmark economy, as the state or national economy. A LQ greater than 1.0 indicates that a particular industry employs proportionately more workers locally than it does at the state or national level. Conversely, a LQ of less than 1.0 indicates that the industry of note employs fewer workers locally as compared to the state or national average. For additional information on LQs, see <http://arrowheadcenter.nmsu.edu/sites/default/files/uploadedcd/WhatisaLocationQuotient.pdf>.

In this report, LQs are calculated and analyzed for the industries within Eddy County with national employment as the basis for comparison (see Table 1). Additionally, LQs using employment for the state of New Mexico as the benchmark are included (see Table 2). For the purposes of this report, basic industries are identified using general knowledge about the structure of the local economy combined with LQs greater than 1.0. LQs are described for the most recent year for which data were available and the six years preceding (2007-2013). The economic data used in this report are from the U.S. Department of Commerce, Bureau of Economic Analysis (BEA) which can be found at www.bea.gov.

Eddy County, New Mexico

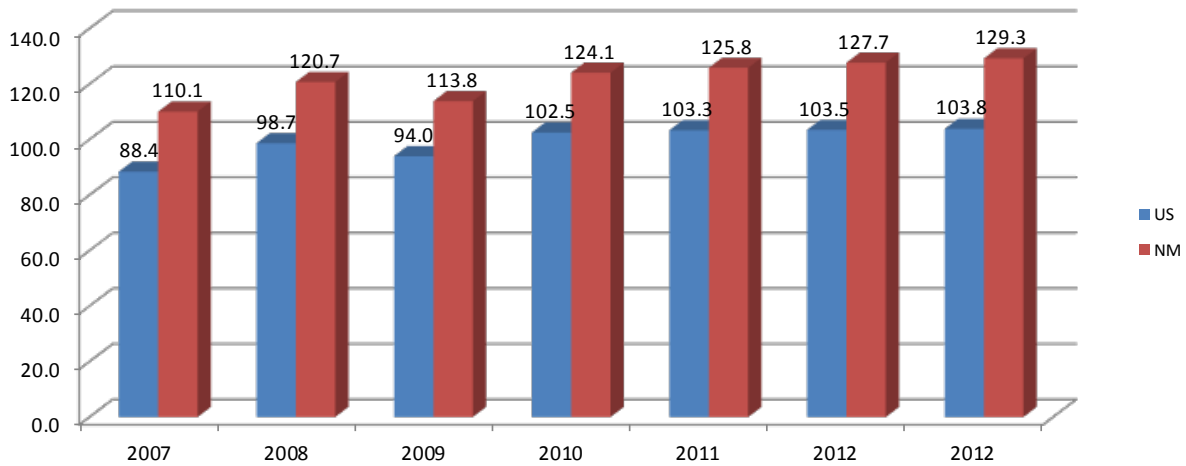

Eddy County is located in southeastern New Mexico and encompasses 4,175.73 square miles, or 3.44 percent of the land area in New Mexico. The population of Eddy County in 2013 was 54,471, or 2.66 percent of the state total, ranking 11th in the state of New Mexico in terms of population. Between 2007 and 2013, the population of Eddy County increased by 6.83 percent. The city of Carlsbad, with a population of 27,653 in 2013, accounted for 50.77 percent of the population of Eddy County. For comparison purposes, New Mexico's population increased by 4.78 percent and the United States population increased by 4.95 percent between 2007 and 2013.

Figure 1. Per Capita Personal Income 2013

Per capita personal income in Eddy County in 2013 was \$46,488, ranking fourth in the state in terms of per capita income. Per capita income for Eddy County was 129.3 percent of the state’s (\$35,965) and 103.8 percent of the national average (\$45,765) (see figure 1). Between 2007 and 2013, the growth rate of per capita income in Eddy County increased by 32.06 percent, substantially higher than the state growth rate (12.46) and the nation (12.46) for the same period. This growth rate reflects some drastic yearly changes in the per capita income of Eddy County; from the accelerated growth rate of 14.60 percent in 2008, to the decrease of 8.22 percent in 2009, growth rate of 11.18 percent in 2010, and 6.28 percent growth rate in 2011.

Figure 2 : Per Capita Income of Eddy County as Percent of U.S. and New Mexico, 2007-2013

Total employment in Eddy County in 2013 was 34,587. Between 2007 and 2013, total employment in Eddy County increased 18.46 percent, significantly higher than the state which had a

decline in employment of 2.30 percent and the nation which has a 1.33 percent increase between 2007 and 2013. The employment to population ratio for Eddy County was 0.62, compared to the state (0.52) and the nation (0.58).

In 2013, 85.89 percent of all workers in Eddy County were employed in the private sector, while 11.43 percent were employed in Government and government enterprises, and 2.68 percent were accounted for in Farm employment. Within the private sector, the industries with the highest percentages of total employment included: Mining (23.61), Retail trade (9.53), Health care and social assistance (8.32), and Construction (7.18). Government employment is largely concentrated at the local government with 7.17 percent of total employment. Federal/civilian, military, and state government employment each accounted for 1.83, 0.44, and 1.99 percent of total employment respectively. Employment for Eddy County by sector is displayed in Table 3.

Basic and Non-Basic Industries in Eddy County, New Mexico

Table 1 contains LQs for Eddy County from 2007 to 2013 calculated using data for the United States as the basis of comparison. Table 2 contains LQs for Eddy County from 2007 to 2013 calculated with respect to the state of New Mexico. For the purposes of this report, a LQ greater than 1.0 with respect to U.S. employment is considered as a basic industry. The sectors with an LQ greater than 1.0 have been shaded.

The pronounced importance of Mining within the private sector is represented by the highest LQ for Eddy (26.78) in 2013. Mining is considered a basic industry in this county. The mining sector has historically been an important economic sector for Eddy County, with LQs above 21.89 for all years considered here. The mining industry in Eddy County includes potash, oil, natural gas extraction, sulfur, salt and gravel. In 2013, the county of Eddy ranked first in oil production and third in gas production in the state.

For 2013, all other industries in Eddy County have relative low LQs compared to its LQ for mining. Farm employment (1.86) is considered a basic industry for Eddy County. Transportation and warehousing (1.15) is also considered a basic industry for Eddy County. Accommodation and food services and Forestry, fishing, and related activities industries, which were previously considered basic industries (2006-2009), will not be considered a basic industries for Eddy County in 2013 because their LQ dropped below 1.0. Accommodation and food services industry reflected the employment result related to the Carlsbad Caverns National Park and its associated tourism. Other industries with LQs

above 1.0 include: Utilities (1.82) and Construction (1.41). However, the later industries are considered as non-basic industries for Eddy County.

The entry labeled Government and government enterprises is the aggregate figure of all government levels listed as government categories. For Eddy County, Federal/civilian employment with an LQ of 1.18, was the only government sector with an LQ greater than one, and is considered a basic industry. State government had a LQ of 0.69, while Military had an LQ of 0.39, and Local government had an LQ of 0.94. All other government employment sectors are classified here as non-basic industries in Eddy County.

In brief, the data and analysis suggest that for 2013, the following industries should be considered basic industries in Eddy County:

1. Mining, accounted for 8,166 jobs.
2. Farm employment, accounted for 927 jobs.
3. Transportation and warehousing, accounted for 1,305 jobs.
4. Federal, civilian accounted for 633 jobs.

It is common in economic base studies to calculate an export-base employment multiplier. This employment multiplier is obtained by dividing total employment by total employment in the basic sectors. In the case of Eddy County the multiplier is equal to 3.14 (32,674/ 11,031). This ratio suggests that the addition of each basic sector job in Eddy County would be associated with additional 3.14 non-basic sector jobs. The export base multiplier (3.14) calculated above reinforces the importance of basic (exporting) industries to the economy of Eddy County. In general terms, this employment multiplier is not to be compared to employment multipliers included in economic impact analysis tools including RIMS, REMI, and IMPLAN. In the case of Eddy County, potential double counting occupation may result in an upward bias of the multiplier given that farm proprietors often have more than one occupation.

Local economic development policy actions such as the creation of industrial parks, tax abatement and financing, and workforce development projects are often used by local communities to expand an area's economic base. The development of a community economic development plan is to include the appropriate combination of policies, which often result from public and private sector interaction.

Changes from Prior Year

This document has been revised to reflect data figures obtained from the BEA for the economic data and the U.S. Census for population data. Between 2012 and 2013, the population for Eddy County increased by 1.90 percent, from 54,435 in 2012 to 55,471 in 2013. From 2012 to 2013, per capita income increased by 1.66 percent, from \$45,729 in 2012 to \$46,488 in 2013. Total employment increased by 1,433 jobs or 4.32 percent. Basic industries remained the same.
